More Details

Founder Declaration

Educational blockchain reference project • Non-financial • No token sale • No fundraising • No investment claims

Declaration

I, toora dokht, declare that I am the founder and initiator of the Quazenthor (QWBQ) project. This project is a personal educational initiative to deploy a minimal, immutable BEP-20 token on the BNB Smart Chain mainnet as a public reference for learning and technical study.

The project has no commercial intent, no fundraising mechanisms, no token sales, and no investment opportunities. It exists solely to demonstrate standard BEP-20 behavior in a live blockchain environment, allowing developers, students, and researchers to interact with real on-chain mechanics.

All project documentation, updates, and communications are managed by me or designated contributors under my coordination. The project remains fully transparent, with all on-chain activity publicly verifiable via BscScan.

Project Initiation & Coordination

As the founder, I am responsible for:

- Deployment of the smart contract on January 31, 2026
- Preparation and maintenance of all project documentation
- Coordination with independent contributors for technical review and website support
- Ensuring alignment between published information and on-chain data

Updates and clarifications are tracked in the changelog.
Last updated: February 2026.

Project Purpose

Quazenthor exists solely as a technical reference implementation — not as a financial product, investment vehicle, or speculative asset.

The fixed-supply contract enables learners and developers to observe:

- Real gas consumption and transaction confirmation
- Standard BEP-20 event emission
- Allowance and approval mechanisms
- Gradual on-chain distribution for educational testing
- Immutable behavior in actual network conditions

Ownership & Control

Contract ownership remains with the deployer address to maintain implementation stability.

Deployer Address:
0x0daeb75bf06b879164d0753fa9d695763fcd1f49

The contract contains no privileged functions (no mint, burn, pause, upgrade, tax, or administrative controls).

Risk Disclosure

Interacting with any blockchain token involves risks, including smart contract behavior, network conditions, user error, and potential permanent loss of funds.

This project assumes no responsibility or liability for any user actions or outcomes.

The token is not a security, financial instrument, or investment product. Nothing on this website constitutes financial, investment, or legal advice.
