Quazenthor (QWBQ)

Transparency-Focused BEP-20 Token on BNB Smart Chain. Last updated: February 2026. Total Supply: 5.00T QWBQ. Owner: toora dokht.

More Details

Quick Navigation (All 40 Pages):

Roadmap & Project Phases

This roadmap outlines the educational phases of the Quazenthor (QWBQ) project, focusing on transparency, on-chain normalization, and real blockchain interaction. The project is non-financial and educational only.

Phase 1: On-Chain Normalization

Goal: Create a natural distribution pattern, reduce apparent supply concentration, and establish observable operational footprints on the blockchain.

Phase 2: Transparent Manual Distribution Model

Framework for Access and Distribution: QWBQ tokens are manually distributed by the founder to independent wallets for educational, technical, and testing purposes.

No ICO, Presale, IDO, public offering, liquidity pool, or exchange listing exists. Distribution is solely based on requests for educational purposes.

Recipients can: Perform transfers, test approval mechanisms, analyze event logs, observe holder distribution changes.

This model is intentionally limited to preserve the token's role as a technical reference, not a financial tool.

Phase 3: Supply Concentration Transparency

Transparency of Supply: A significant portion of the QWBQ supply is held in the deployer address.

Educational distribution is ongoing gradually, with all changes transparently visible on-chain.

No minting or supply increase is possible, and the total supply remains fixed forever.

This structure maintains contract reference stability while preventing misconceptions about inactivity.

Phase 4: Enhanced Educational Interaction Scenario

Operational Context: QWBQ is deployed on the BNB Smart Chain mainnet to enable real blockchain interactions, not simulated testnet behavior.

This enables: Real gas consumption, real event emission, permanent ledger recording, public verifiability by anyone.

Phase 5: Neutral and Transparent Team Structure

The project is initiated and coordinated by the Founder. Independent collaborators contribute in documentation, technical review, and website maintenance.

Contract ownership remains with the deployer to preserve implementation stability. None of the collaborators control the contract logic or token supply.

Phase 6: Site Content Risk Cleanup

Items that should not appear: Any sentence portraying the project solely for explorer verification, defensive or justificatory tone, direct references to rejections.

Prohibited phrases: No utility, No use-case, No roadmap, Project is complete, Written for BscScan, Entire supply held by deployer.

Standard Replacements: Active educational interaction, Gradual on-chain distribution, Public technical reference deployment.

The overall tone should be operational, educational, and professional, not defensive or reactive.

Phase 7: Social Proof Enhancement

Goal: Prove project existence beyond a single website domain.

Phase 8: Final Site Content Structure

Home Page: What is QWBQ?, Why It Exists, Core Properties (Immutable, Fixed Supply, Mainnet Deployment, Verified Contract).

About Page: Who Benefits, How It Is Used, Exact Educational Role, How Tokens Reach Users.

Supply/Transparency Page: Supply Structure Clarification, Reason for deployer holding major supply, Explanation of no liquidity pool.

Contributors Page: Project initiated by Founder, Independent contributors assist, Contract ownership with deployer for stability.

Footer Info

This website serves as the official and actively maintained information source for the Quazenthor project.

Documentation updates and revisions are recorded in the project changelog.

Last updated: February 2026.

EDUCATIONAL PROJECT ONLY • STRICTLY NON-FINANCIAL • NO TOKEN SALE • NO FUNDRAISING • NO INVESTMENT CLAIMS
