Scope Declaration

Educational blockchain reference project • Non-financial • No token sale • No fundraising • No investment claims

Project Purpose & Boundaries

Quazenthor (QWBQ) is a minimal, fixed-supply BEP-20 token deployed on the BNB Smart Chain mainnet exclusively for educational and technical reference purposes.

The project demonstrates standard BEP-20 behavior in a live blockchain environment, allowing learners to interact with real on-chain mechanics such as transfers, approvals, events, and immutable supply.

It is not intended for financial use, trading, speculation, or any commercial activity. No token sales, fundraising, investments, or liquidity provisions are involved.

The token is designed for students, developers, and researchers who want to study immutable smart contract behavior in a live blockchain environment — including real gas usage, transaction finality, and event emission.

The name and symbol are used only for project identification and have no affiliation with any existing entity or brand.

Deployment & Core Properties

Key fixed parameters (set at deployment and immutable):

- Total Supply: 5,000,000,000,000 QWBQ (5.00T) – permanently fixed
- Decimals: 18
- Contract Address: [0x013f5f2F7F5b027012415A783ac2ed69EF936aE8](#) – source code verified on BscScan since January 31, 2026

The contract includes only standard BEP-20 functions. There is no minting, burning, taxation, upgradeability, or administrative logic.

Tokens are gradually distributed manually for educational and testing purposes upon request. All movements are transparent and visible on-chain.

Ongoing Maintenance

The project focuses solely on documentation accuracy and public accessibility:

- Minor updates to wording or links (all changes logged in changelog)
- Website availability and security monitoring
- Responding to legitimate transparency inquiries via official email

No changes are made to the smart contract or token logic.

Token Supply Structure

Total supply is permanently fixed at 5,000,000,000,000 QWBQ.

- No minting function exists
- No burning function exists
- No taxation or fee mechanisms
- No upgradeability or proxy pattern

This design guarantees long-term stability for educational reference and analysis.

Educational Usage & Interaction

QWBQ enables learners to:

- Perform real token transfers between wallets
- Test approve / allowance mechanics
- Monitor Transfer and Approval events
- Observe changes in holder distribution over time
- Verify fixed supply behavior on mainnet

All interactions consume real gas and are permanently recorded on the BNB Smart Chain.

Risk & Legal Disclosure

Interacting with any blockchain token involves risks (gas fees, user error, network conditions). No responsibility is assumed for user actions.

This token is not a security, financial instrument, or investment product. Nothing on this site constitutes financial or legal advice.
