

# WDU TRUST TOKEN (WDU)

## Frequently Asked Questions

Fixed-Supply BEP-20 Token on BNB Smart Chain

---

### General Questions

**Q: What is WDU Trust Token (WDU)?**

A: WDU Trust Token (WDU) is a fixed-supply BEP-20 token deployed on the BNB Smart Chain mainnet. It demonstrates standard BEP-20 behavior (transfers, approvals, events, holder distribution) in real network conditions. Total supply is permanently fixed at 700,000,000,000,000 WDU.

**Q: Is WDU an investment or financial product?**

A: No. There is no ICO, no presale, no token sale, no fundraising, no liquidity pool, no exchange listing, and no investment opportunity. Any third-party trading is independent and unrelated to the project.

**Q: Why was the token deployed?**

A: To provide a transparent, immutable, real-world example of a standard BEP-20 contract on mainnet — allowing observation of actual on-chain mechanics, gas usage, event emission, and holder distribution changes.

**Q: Who controls the contract?**

A: Ownership remains with the deployer. The contract contains no mint, burn, pause, tax, upgrade, or administrative functions beyond standard BEP-20 operations. The contract is permanently immutable in logic and supply.

**Q: How can I get some WDU tokens?**

A: Small amounts are manually distributed upon legitimate request. Contact [admin-wdu@quazenthor.com](mailto:admin-wdu@quazenthor.com). All distributions are transparent and visible on-chain. No public claim, airdrop, or automatic mechanism.

**Q: What if I see WDU being traded or pooled?**

A: Any trading or pooling is done by independent third parties and is not associated with the WDU Trust Token project. Always verify through official channels only.

**Q: Are there risks I should know?**

A: This is a standard BEP-20 token. Do not purchase or trade expecting any return. Use only amounts you can afford to lose.

### Audit & Security Questions

**Q: What is the audit and security report?**

A: An internal code review of the WDU smart contract for transparency. Fixed-supply immutable BEP-20 on BNB Smart Chain mainnet.

**Q: What is the review scope?**

A: Standard BEP-20 implementation; absence of custom logic, fees, taxes, minting; immutability and simplicity; consistency between verified source and bytecode. View on BscScan.

**Q: Key findings?**

A: Low-risk: permanently fixed supply (no mint/burn), no fees/tax, no privileged functions, fully immutable, standard BEP-20 only.

**Q: Official verification channels?**

A: Website: [quazenthor.com/wdu](https://quazenthor.com/wdu) · Email: [admin-wdu@quazenthor.com](mailto:admin-wdu@quazenthor.com) · BscScan: Verified 2025-12-18 · Contract: 0x74D7d1aD19bD14655cD0Ab26BEcc57ED69d69413

### Roadmap & Involvement

**Q: How to get involved?**

A: Request tokens via [admin-wdu@quazenthor.com](mailto:admin-wdu@quazenthor.com) for technical testing. No sales or liquidity; manual gradual distribution. Intended for developers, researchers, and technical users.
