
WDU TRUST TOKEN (WDU)

Project Identity

Fixed-Supply BEP-20 Token on BNB Smart Chain

Project Identity

WDU Trust Token (WDU) is a transparent, fixed-supply BEP-20 token deployed on the BNB Smart Chain mainnet. The project is initiated by the founder with support from independent contributors focused on documentation, technical review, and website maintenance. The project has no commercial structure, no legal entity, and no financial operations.

Founder & Contributors

Founder: woodi usimo – Project initiator, contract deployer, and coordinator of all project materials.

Independent contributors may assist with documentation, technical review, community communication, and website maintenance. No contributor has control over the smart contract, token supply, or on-chain operations.

Purpose & Role

WDU Trust Token provides a minimal, fixed-supply BEP-20 contract enabling observation of real gas consumption, event emission, approval and allowance mechanisms, holder distribution changes, and immutable contract behavior. Tokens are distributed manually upon request.

Ownership & Transparency

Contract ownership remains with the deployer to preserve stability.

Contract: 0x74D7d1aD19bD14655cD0Ab26BEcc57ED69d69413

All balances, transfers, and events are publicly visible on-chain.

Risk Disclosure

Interacting with any cryptocurrency involves risks including market volatility, smart contract behavior, network conditions, and potential loss of funds. WDU Trust Token (WDU) is a standard BEP-20 token. Users should conduct their own research and only use amounts they can afford to lose.
