
WDU TRUST TOKEN (WDU)

Roadmap & Project Phases

Fixed-Supply BEP-20 Token on BNB Smart Chain Mainnet

This roadmap outlines the project phases of WDU Trust Token (WDU), a fixed-supply BEP-20 token on BNB Smart Chain mainnet. The focus is on transparency, on-chain visibility, gradual distribution, and continuous documentation improvement.

Phase 1: On-Chain Normalization

Goal: Create a natural distribution pattern, reduce apparent supply concentration, and establish observable operational footprints on the blockchain. All activity remains fully transparent and verifiable on BscScan.

Phase 2: Transparent Manual Distribution

WDU tokens are distributed manually by the founder to independent wallets. Distribution is gradual, request-based, and fully visible on-chain. Recipients can perform transfers, test approval mechanisms, analyze event logs, and observe holder distribution changes.

Phase 3: Supply Transparency

A significant portion of the WDU supply is held in the deployer address for controlled release. Distribution is ongoing gradually, with all changes transparently visible on-chain. No minting or supply increase is possible — the total supply remains fixed forever at 700T WDU.

Phase 4: On-Chain Interaction

WDU is deployed on the BNB Smart Chain mainnet to enable real blockchain interactions. This includes real gas consumption, real event emission, permanent ledger recording, and public verifiability by anyone on BscScan.

Phase 5: Team Structure

The project is initiated and coordinated by the Founder (woodi usimo). Independent collaborators may contribute in documentation, technical review, and website maintenance. Contract ownership remains with the deployer address to preserve implementation stability. None of the collaborators control the contract logic or token supply.

Phase 6: Content Cleanup & Professional Presentation

Continuous refinement of website content for clarity, professionalism, and consistency. Focus on operational and transparent presentation of the fixed-supply BEP-20 token, its contract, and on-chain activity.

Phase 7: Social Proof & Multi-Channel Presence

Establish and maintain presence across official channels including Website, X (Twitter), Telegram, Medium, GitHub, Bitcointalk, Facebook, and Instagram. Goal: Prove project existence and activity beyond a single domain.

Phase 8: Site Structure & Organization

Organized page structure for clarity: Home (What is WDU, Why It Exists, Core Properties), About, Tokenomics, Supply & Transparency, Contributors, Roadmap, Whitepaper, Network Links, and supporting documentation pages.
