
WDU TRUST TOKEN (WDU)

Scope Declaration

Fixed-Supply BEP-20 Token on BNB Smart Chain

Project Purpose & Boundaries

WDU Trust Token (WDU) is a fixed-supply BEP-20 token deployed on the BNB Smart Chain mainnet. The project demonstrates standard BEP-20 behavior in a live blockchain environment, including transfers, approvals, events, and immutable supply. It is not intended for financial use, trading, speculation, or commercial activity. No token sales, fundraising, investments, or liquidity provisions are involved. The name and symbol are used only for project identification.

Deployment & Core Properties

Total Supply: 700,000,000,000,000 WDU (700T) – permanently fixed. Decimals: 18. Contract: 0x74D7d1aD19bD14655cD0Ab26BEcc57ED69d69413 – verified on BscScan since December 18, 2025. Only standard BEP-20 functions. No minting, burning, taxation, upgradeability, or administrative logic. Tokens are distributed manually upon request. All movements are transparent on-chain.

Ongoing Maintenance

The project focuses on documentation accuracy and public accessibility: minor updates to wording or links (logged in changelog), website availability and security monitoring, responding to legitimate inquiries via official email. No changes are made to the smart contract or token logic.

Token Supply Structure

Total supply is permanently fixed at 700,000,000,000,000 WDU. No minting function, no burning function, no taxation or fee mechanisms, no upgradeability or proxy pattern.

Usage & Interaction

- Perform real token transfers between wallets
- Test approve / allowance mechanics
- Monitor Transfer and Approval events
- Observe changes in holder distribution over time
- Verify fixed supply behavior on mainnet

All interactions consume real gas and are permanently recorded on the BNB Smart Chain.
